--ABSTRACT OF THE DISCLOSURE

B¹ A control device or "bird" for controlling the position of a marine seismic streamer is provided with an elongate, partly flexible body which is designed to be electrically and mechanically connected in series with a streamer. In its preferred form, the bird has two opposed wings which are independently controllable in order to control the streamer's lateral position as well as its depth.--

In the Claims

Please add the following new claims:

14. A control device adapted for controlling a position of a marine seismic streamer, comprising:

B² a body mechanically connected in series between two sections of the streamer,

a sensor apparatus in the body adapted for determining an angular position of the body in a plane approximately perpendicular to a longitudinal axis of the streamer,

control surfaces projecting outwardly from the body, each control surface being rotatable about an axis which, in use, extends transversely of the streamer, and
